

Online Hydrologic Modeling of Agricultural Erosion: Future Climate Scenarios

Dylan Quinn

REACCH REU 2013

Mentors: Erin Brooks | Ryan Boylan

Palouse 1920s – 1930s

Motivation

- Recent studies have shown a significant decline in erosion (Kok et al., 2009; Brooks et al., 2010)
 - Due to reduced tillage management practices
- 1000+ water bodies in Idaho violate the CWA
 - Most dominant is sediment
 - Similar for the PNW

Motivation

- Little evidence of significant declining pollutant loading in many watershed studies (Mulla et al., 2008)
 - Failure to implement BMPs in the most critical areas of the watershed.

Motivation

- Better tools are needed to identify these critical areas and improve them with appropriate BMPs. (Mulla et al., 2008)
 - Simple
 - Minimal data requirements
 - Minimal calibration

REACCH Solutions

- 2005 Tillage practices in the PNW (Kok et al., 2009)
 - Conventional till – 40%
 - Mulch till – 50%
 - No till – 10%

The Big Picture

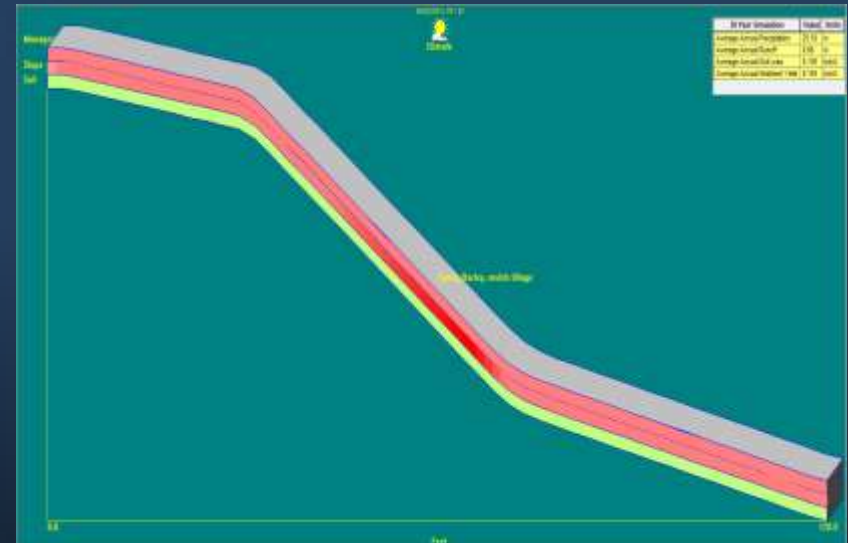

- Will current BMPs be as effective in the future?
 - Changing climate zones
 - Will rainfall intensity increase?
 - More runoff and erosion
- How can we mitigate these impacts?

Current Needs

- Targeted erosion control practices
- Simple modeling tools
 - Efficient and effective management practice
 - Minimize
 - Erosion
 - Runoff
 - Pollutants

WEPP Model

- **W**atershed **E**rosion **P**rediction **P**roject
- Developed by the USDA
- Process-based hydrology and erosion model
 - Not empirical
- Extensive input
- Time consuming
- Data readily available
 - Soil (USDA SURRGO)

HCT: Hydrologic Characterization Tool

Select Data Files

REACCH

Select State for climate: REACCH

Select climate file: rosalia

Select slope file:

- Flat (2_2_2)
 Mod Flat (2_5_2)
 Moderate (2_8_2)
 Mod Steep (5_12_5)
 Steep (5_35_5)

Select Soil Type:

Soil Type	Depth to Restrict (cm)	Remove Soil
REACCH--palouse	<input checked="" type="radio"/> 152	<input type="checkbox"/>
REACCH--ritzville	<input checked="" type="radio"/> 152	<input type="checkbox"/>
REACCH--naff	<input checked="" type="radio"/> 43	<input type="checkbox"/>
naff <input type="button" value="Add Soil Type"/>		

Select Management Practice:

Management	Tillage Practice	Buffer (m)	Remove Management
REACCH--ww_barley_pea_High_Precip	<input type="radio"/> CT <input type="radio"/> MT <input checked="" type="radio"/> NT	<input type="text" value="0"/>	<input type="checkbox"/>
REACCH--ww_barley_pea_High_Precip	<input type="radio"/> CT <input checked="" type="radio"/> MT <input type="radio"/> NT	<input type="text" value="0"/>	<input type="checkbox"/>
REACCH--ww_barley_pea_High_Precip	<input checked="" type="radio"/> CT <input type="radio"/> MT <input type="radio"/> NT	<input type="text" value="0"/>	<input type="checkbox"/>
ww_barley_pea_High_Precip <input type="button" value="Add Management Practice"/>			

* Tillage Practices: Conventional Till (CT), Mulch Till (MT), No Till (NT)

How many years would you like to simulate?

- Based on the WEPP Model
- Uses common default parameters
- Few inputs
 - Climate
 - Soil
 - Management practice
 - Slope

HCT Limitations

- Static data
 - New regions, climates, soils and management must be added manually
- Represents a single slope
 - Characteristic land type

Objectives

- Create tools to generate soil and climate files
 - Climate tool (Stephen)
 - Soil tool (USDA STATSGO 2006)
- Improve HCT scope
 - Incorporate future climate scenarios
 - Generate widespread soil files
- Apply HCT throughout the REACCH region
 - 2 AEZs
 - Future climate scenarios
 - Predict runoff & erosion rates

Soil File Generation

- Uses USDA STATSGO Soil Survey data (2006)

- Access Database files

- SQL

```
SELECT cl.musky AS musky, cl.cobey AS cobey, cl.campgt_2 AS campgt_2, cl.campgt AS campgt INTO final_components_bmlast_18
FROM component_ad AS cl LEFT JOIN component_ad AS c2 ON (cl.musky = c2.musky AND (cl.campgt_2 < c2.campgt_2))
WHERE cl.musky IS null;
```

- Soil File Tool (Python)

- Gathers Data

- Sorts

- Output

```
def sort_values(values_list):
    """Sorts the list of values (str, int, float, ...) from the largest to the smallest value or vice versa
    depending on the type of the values
    returns an array of dictionaries and a dictionary"""
    horizon_wcs = []
    layers_array = []

    for horizon in values_list:
        #horizontal coordinate
        rocks_well = 4 if horizon['horiz_well'] is None else horizon['horiz_well'] + 1 if horizon['horiz_well'] is None else horizon['horiz_well']
        soil_pct_rocks = 0 if horizon['horiz_rocks'] is None else (100-rocks_well)/100 if horizon['horiz_well'] is None else horizon['horiz_well']/100
        #to do, rocks = 0 if horizon['horiz_rocks'] is None or rocks_well is None else horizon['horiz_rocks']/100-rocks_well/100
        #to do, rocks = 0 if horizon['horiz_rocks'] is None or rocks_well is None else horizon['horiz_rocks']/100-rocks_well/100
        #to do, rocks = 0 if horizon['horiz_rocks'] is None or rocks_well is None else horizon['horiz_rocks']/100-rocks_well/100
        depth = round(float(horizon['horiz_d']/10), 1)
        try: hor_well = round(float(horizon['horiz_well']/10), 1)
        except:
            hor_well = 1.0 #default
            print "Using default hor_well value"
        try: soil = round(float(horizon['horiz_rocks']/10), 1)
        except:
            soil = 20.0 #default
            print "Using default soil value"
        try: c1p = round(float(horizon['horiz_c1']/10), 1)
        except:
            c1p = 20.0 #default
            print "Using default c1p value"
        try: c2p = round(float(horizon['horiz_c2']/10), 1)
        except:
            c2p = 10.0 #default
            print "Using default c2p value"
        try: rocks = round(float(horizon['horiz_rocks']/10), 1)
        except:
            rocks = 0
            print "Using default hor_pct_rocks value"
```

Soil File Generation

- ArcMap interface
 - Select soil unit
- Console interface
 - Input: unit key into the soil tool
 - Output: CT, MT, and NT soil files

Climate File Generation

- Stephen Fricke (John Abatzoglou)
- RCP 4.5 (CNRM-CM5 Model)
- Generate WEPP file with Cligen 5.3
- Climate tool (PERL)
 - Adds wind speed & solar radiation

Erosion Comparison: Intermediate Crop (Dry)

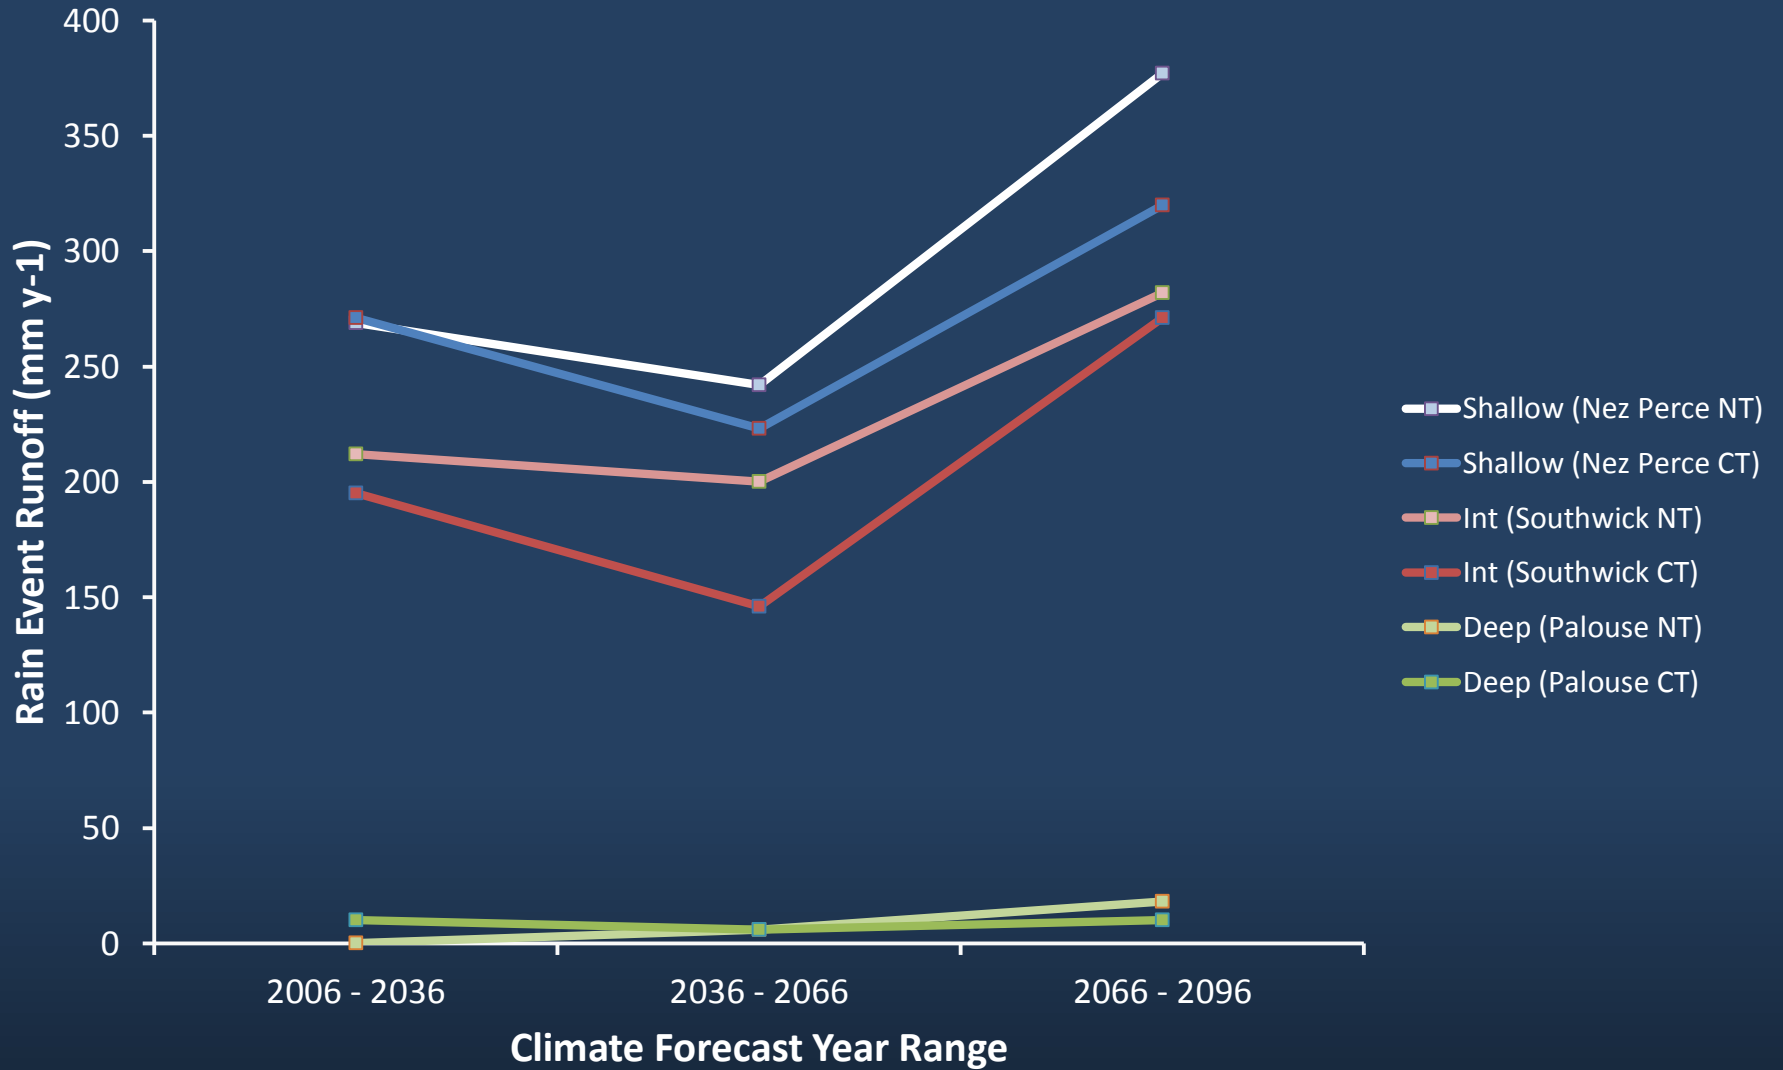

Tillage Practices: Conventional Till – CT; Mulch Till – MT; No Till – NT

Erosion Comparison: Annual Crop (Wet)

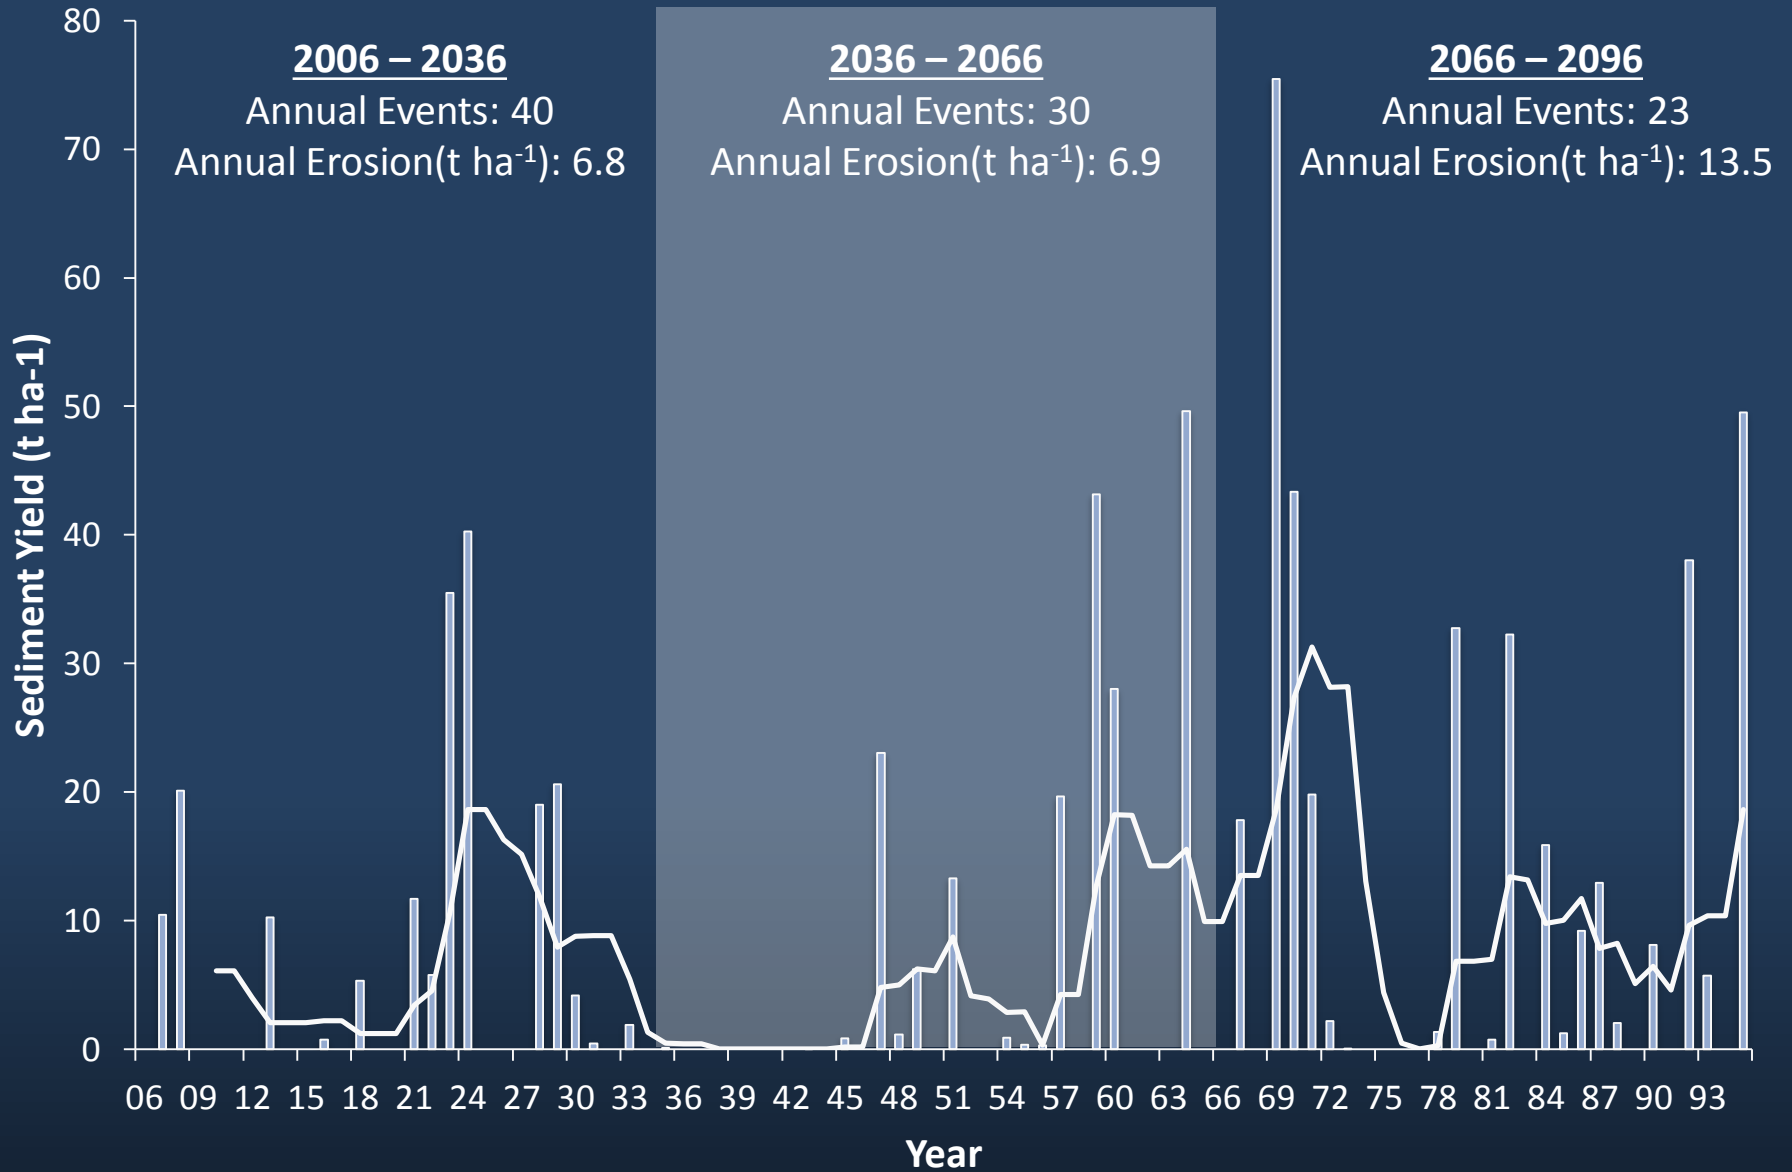

Tillage Practices: Conventional Till – CT; Mulch Till – MT; No Till – NT

Rain Runoff: Annual Crop Zone

Tillage Practices: Conventional Till – CT; Mulch Till – MT; No Till – NT

Erosion Events by Year: Annual Crop Wet

Summary

- Developed WEPP soil and climate file generation tools (Python, Perl)
- Mulch Till is an effective practice
 - ~85% reduction in soil erosion
- Future climate simulations suggest
 - Fewer erosion events
 - Increasing magnitude

Future Application

- HCT
 - Dynamic map-based data selection
 - Soil
 - Server side climate generation
- Soil Creation
 - ArcMap tool
- Investigate the assumption of static rainfall intensity characteristics in future climate scenarios
